

TrussWall® Changes the Industry

PART 3 | 2011 | Based on Trussbilt's 85 year history of producing high quality detention products and its unmatched record of new product development, TrussWall has transformed the detention construction industry.

Adelanto Detention Center Expansion Project Adelanto, CA 504 cells • Total project cost \$99 M

“HOK has had a long standing relationship with Trussbilt and in particular with development and use of their TrussWall system. Working closely together on the Maricopa County 4th Avenue Jail project in Phoenix, we successfully designed and installed the first detention project to use TrussWall. Over a decade later, we continue to specify this system time and time again due to its longevity and continued improvements over the years.

Most recently, Trussbilt's seamless design and Primecoat finish have elevated the final product to a level that exceeds any other cell wall finish in the market. Trussbilt has also provided innovative design solutions and assistance to our design team for using TrussWall in areas outside of cell wall construction. Trussbilt's service, reliability and commitment to their product have made HOK a repeat customer and have contributed to our long list of satisfied clients.”

April Lenkey, AIA, LEED® AP BD+C
Vice President, Regional Leader, Justice
HOK

“As a General Contractor in the detention market we rely on our subcontractors and suppliers to provide quality products in a timely manner. We have worked with Trussbilt on multiple projects and they have always exceeded our expectations and delivered a finished product that not only meets the needs of our clients but that also gives us a facility that we can turn over with pride.

We pride ourselves in being a relationship-driven contractor and Trussbilt shares that same value. From the top of the organization all the way down to the line workers the people at Trussbilt value their clients and their reputation and take pride in their work across the board. The people at Trussbilt are always looking for ways to improve their products, to become more efficient in their production and delivery, and to meet the needs of clients, contractors, end users and designers.

We are currently using Trussbilt products while constructing the Adelanto Detention Center in San Bernardino County. This is the first project to be constructed under California's new AB900 program. This program, funded by the State, has pushed the responsibility of detaining convicted criminals back down to the County level. This has caused tremendous pressure on counties to construct facilities which will enable them to house this new classification of inmates. Trussbilt's TrussWall system has allowed us to construct a quality facility in a quick time frame. We began installing TrussWall panels to create cells while we were still constructing the structure above. This has allowed us to save time in delivering the finished product. Our client is thrilled with the quality and functionality of the new cells. The Invisaseam finish has greatly improved the visual appearance of the cell, reduced overall maintenance and reduced an inmate's ability to create hiding spaces for contraband. This is a tremendous benefit to the end user and makes for a very clean, maintenance free surface.

Along with their TrussWall panel system, Trussbilt has provided us with quality doors, frames, hardware and detention furniture, giving us a single source for our detention-related products. This helps us to be competitive in the market place and gives our clients and end users quality products throughout their facility.

I highly recommend Trussbilt's TrussWall panel system for any detention facility and am very proud of our association with the people at Trussbilt. Their people make Trussbilt's products the gold standard in the market.”

Bill Dobyns, DBIA, LEED AP
Vice President of Operations
Lydig Construction, Inc.

When complemented with Trussbilt's other security products, the TrussWall Cell System is the most integrated, cost effective solution available.

TrussWall Cell System

TrussWall® Security Wall Panels

TrussDoor® Security Doors and Frames

TrussDek®, BarrierDek® and SecureDek® Security Ceilings

TrussFloor® Security Floor/Ceiling System

TrussCoat® Finish Paint

Chino Correctional Facility Cell Front Replacement Chino, CA 216 cells • Total project cost \$2.5 M

“Using Trussbilt's Trusswall as a solid cell front system at CIM Chino was great for Legg Inc. as the installer and even better for the correctional officers as end users. Working with TrussWall's light weight panels really helped us out in this facility. Many of the areas to be retrofitted had little space for material storage, poor access, and were very narrow. The panels' light weight plus their narrow 2" thickness made storage, disbursement, and installation much more efficient. Trussbilt's TrussWall solid cell front was a great solution to many issues that the facility was facing with its existing bar grating cell fronts. With the bar grating, many correctional officers were exposed to violent attacks by the inmates and were forced to wear protective gear and facemasks when entering the cell blocks. Another benefit of the Trusswall cell front was putting a stop to prisoner-to-prisoner communication as well as their ability to pass notes and contraband between cells. This made for a much safer environment.”

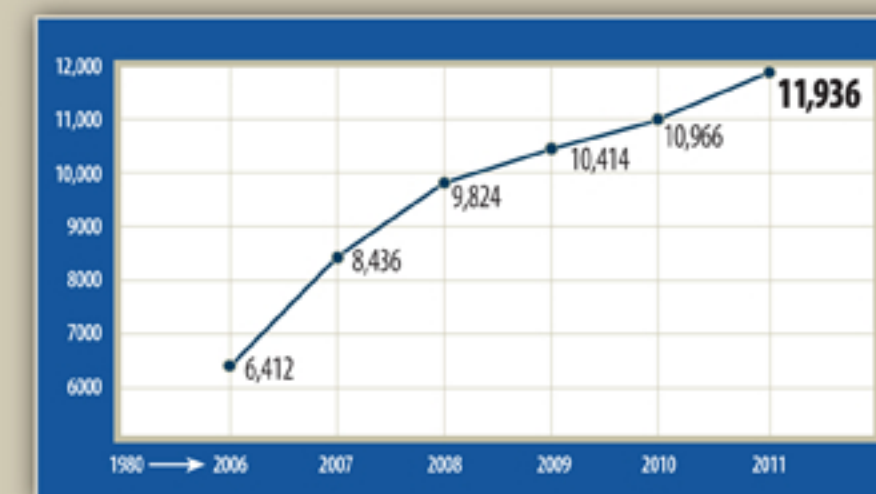

Jim Carroll
Project Manager
Legg Inc.

PROJECT RESUME: PART 3 Total TrussWall® Cells Installed 1980 - 2011

2011

Adelanto Deten. Center Expansion Prog, Adelanto, CA (504)
