

# FACTORY-INSTALLED GROUT

now available from Trussbilt

## Trussbilt announces its latest innovation: Factory-installed grout for TrussWall® and TrussFloor® panels

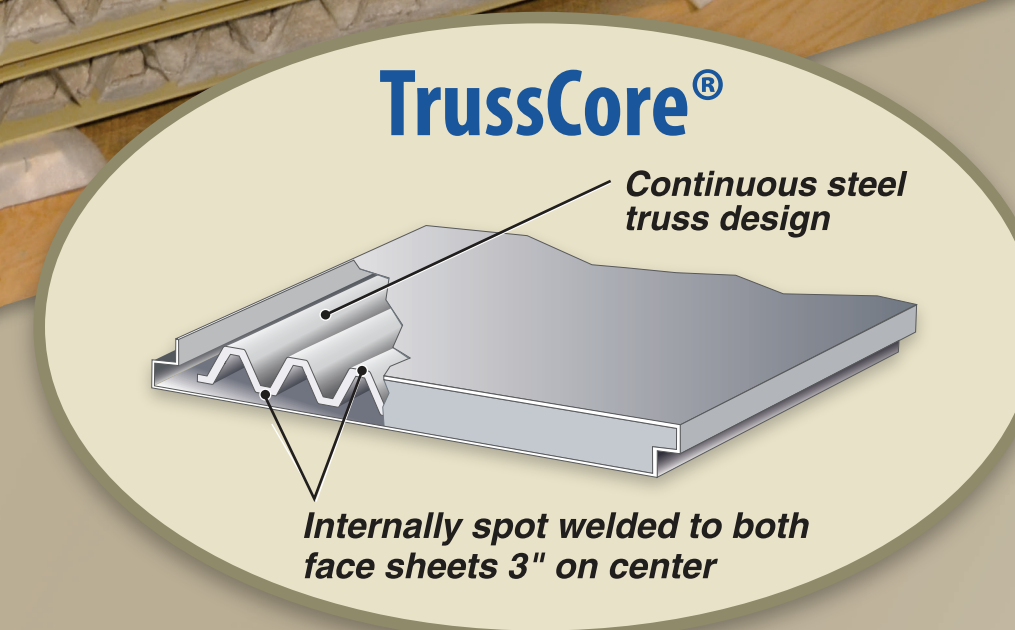

- No special tools required for on-site cutting or panel resizing
- No missed days because the grouting contractor didn't show up
- No interruption of mezzanine-level installation while waiting for panel grouting
- Superior STC rating with no impact on security

Grout installed at Trussbilt factory, panels ready to ship.  
Panels are palletized in the order of installation to limit onsite handling.

Eliminates onsite panel grouting

### Factory-installed grout delivers significant benefits:

- Reduced grout weight
- Greatly increased speed of installation
- Assured uniform grout quality
- Lower labor costs with factory labor vs. on-site labor
- Lower costs for grout and on-site cleanup

TrussWall's 2" thick steel panels use Trussbilt's unique TrussCore® construction, internally welded to both face sheets. Trussbilt has the capacity to produce over 100,000 panels annually.

**Trussbilt's factory-installed grout is another example of Trussbilt innovation and responsiveness to customer requests – the reason Trussbilt is the market leader in detention security products.**

When complemented with Trussbilt's other security products, the TrussWall® Cell System is the most integrated, cost effective solution available.
